ZHANG JINGYI

Email: jyzhang0222@gmail.com

PROFESSIONAL SUMMARY

Data Engineer with over two years of experience at EY, including delivering Azure ETL pipelines for tax reporting automation. Experienced in SQL development, data validation and client technical handover, with additional experience implementing AI solutions on Azure. Currently pursuing a Master of Computing in Artificial Intelligence at NUS, with expected graduation in December 2027 and exposure to large language models (LLMs), database security and data modelling.

CORE COMPETENCIES

- Data Engineering: Azure Data Factory, Azure SQL Database, Azure Functions, Azure AI, ETL/ELT pipelines
- Software Programming: SQL, Python, Git, C, Vue.js, React
- Data Analytics & Visualisation: Tableau, Power BI, Microsoft Office (Word, Excel, PowerPoint, Outlook)
- Soft Skills: analytical problem-solving, collaboration, logical thinking, project management
- Languages: Fluent in English and Chinese (Mandarin)

WORK EXPERIENCE

Tax Technology Transformation Associate Apr 2024 – Jun 2026
Ernst & Young

Data Pipeline & Platform Architecture

- Engineered scalable Azure SQL stored procedures to clean, join and transform ERP data, implementing field mappings and tax reporting calculations.
- Designed, built and deployed Azure Data Factory pipelines to orchestrate SQL transformations and load data into downstream tax reporting platforms via API with error logging, replacing manual Excel preparation.
- Developed an interactive Power BI dashboard for data validation during user acceptance testing (UAT), validating the integrity and consistency of pipeline outputs for stakeholder review.
- Delivered client training and troubleshooting documentation to support pipeline operation after go-live.

AI-Powered Transaction Classification Tool

- Adapted an existing transaction classification solution to Microsoft Azure, implementing a retrieval-augmented generation (RAG) workflow using Azure OpenAI to generate text embeddings and Azure AI Search for low-latency semantic vector search and retrieval.
- Integrated GPT-4o as a reasoning layer to classify new transactions based on historical contextual similarity, cutting manual classification time and effort by approximately 80%.

Client-Facing Project Management

- Coordinated project status tracking, timeline adherence, billing reconciliation, and preparation of executive meeting materials to maintain high delivery standards.

EDUCATION

National University of Singapore (NUS) Aug 2026 – Dec 2027 (*Expected*)
Master of Computing in Artificial Intelligence

- Modules: (1) Introduction to Large Language Models (2) Knowledge Discovery & Data Mining (3) Database Security

Nanyang Technological University (NTU) Aug 2020 – Dec 2023
Bachelor of Engineering (Electrical and Electronic Engineering)

- GPA: 4.11 / 5.00, Honours (Distinction)
- MOE Scholarship Recipient
- Specialisation: Info-communications Engineering (Data Intelligence and Processing)

ACADEMIC PROJECTS

Value Investing with Machine Learning Jan 2023 – Dec 2023
NTU Final Year Project

- Constructed an algorithm to analyse 10 years of financial data from Dow Jones 30 and S&P 500 technology companies, covering over 80,000 data points to pick promising value-investing opportunities.
- Used **Python** programming with three machine learning Models (i.e., LSTM, XGBoost, and random forest) to predict intrinsic values and compare them with stock prices. Identified the most suitable stocks for investment.
